Overview

Climate Receiver Places Project

The goal of the Climate Receiver Places Project is to create a framework for communities to equitably strengthen their futures in response to incoming climate change migration. We will use the policy documents that we create to work with communities in climate-resilient geographies to promote and implement climate-resilient urbanism. Compact, complete, complex communities are a climate change solution for both mitigation and adaptation. Climate receiver places are communities that sit within geographies with low climate-change risk exposure, while maintaining interconnected spatial organizations that have the potential to adapt and grow into resilient communities. [This project identifies and focuses on places with lower climate risk, but is applicable to intermediate receiver places and most communities in general. Whether or not a whole community or a portion of one can be a potential long-term receiver place, the principles of our work are relevant to all places and receiver zones within non-receiver places.](#)

PLACE Initiative

This project is part of PLACE Initiative, which is a policy platform that operates in the intersection between climate change, social justice, and urbanism.

The materials for the Climate Receiver Places Project can be found at placeinitiative.org/receiver-places/

Project Documents

0. Project Summary – A brief introduction and overview of the Climate Receiver Places Project.
1. Receiving Geography Guide – A document to define receiving geography, specific cities, towns, and regions around these municipalities, and the methodology that got us to these conclusions. We also provide supplementary maps and data.
2. Community Principles Guide – A document to define equitable, climate-resilient community principles and how climate receiver places can use them to change mindsets, self-assess, plan, and implement.
3. Community Assessment Guide – A checklist and rating system to qualitatively assess current conditions of a community, direct that community towards certain priorities, and conduct a post-assessment.

We will revise and add to our set of tools and documents based on the outcomes of our first pilot projects.

Overview

Receiving Geography Guide

The Receiving Geography Guide is the first in a series of [several resources](#) that make up the Climate Receiver Places Guide. This document sets the stage for our second document, the [Community Principles Guide](#), which is the centerpiece of the Climate Receiver Places Project.

Through a meta-analysis, we have determined regions with relatively low climate change risk exposure in the [contiguous](#) United States, though this same approach can and should be applied to a global context. From here, we factored in localized flooding risk and well-connected infrastructure systems that lend themselves well to building resilient communities. Places with low localized flood risk and the right spatial structure, sitting within low-risk regions, were added to this project's list of climate receiver places. Within PLACE Initiative's [Resiliency & Adaptation Resource Sheet](#), these communities mostly fall under category one, and sometimes under category two.

These selected geographies are not necessarily already adapting successfully to climate change. Rather, they are geographies with the [strong](#) potential to successfully do so, provided they follow our [Community Principles Guide](#).

We depict receiver regions, receiver places, and methodology in this document. As there is too much data to display directly in this document, we provide supplementary materials on this project's website.

Our geographic analysis is imperfect and incomplete, and is an ever-changing work-in-progress starting point for this project to organize and prioritize its efforts. Our determined receiving geography includes some of the most promising long-term climate receiver places, so we can create the greatest impact for the most people over the longest period of time with the lowest level of risk possible, preserving the strength of the most viable places of the future for generations to come. However, intermediate, short-term and medium-term receiver places exist as well. Receiver zones may also become places of refuge within otherwise non-receiving and sending places. Intermediate receiver places and receiver zones are just as important, and we encourage other groups to focus on these types of places.

Overall, the Climate Receiver Places Project can benefit most communities, not limited to the places that fit our criteria for low climate risks. This is true for long-term receiver places, intermediate receiver places, receiver zones, places that we may have unintentionally missed on our list, and other communities.

Beyond climate receiver places themselves, other communities may face even greater challenges due to climate change. Sending places can manage the process of retreat with dignity to reduce suffering. Migration is a constant fact of our changing world. Sending places are not the primary focus of the Climate Receiver Places Project, though they are quite important. We encourage other groups to make sending places a central focus of their work and to collaborate with us across these intertwined topics.

B. Climate Risk

Introduction to Climate Risk

The receiver places that we've determined sit within counties that have relatively low levels of climate change risk. The risk factors that we've included in a weighted meta-analysis from two sources to determine county-level climate risk scores are listed below.

B.1 CLIMATE RISK FACTORS

Risk Factors from Propublica^{1,2}

- 1. Extreme heat** can stress both health and infrastructure.
- 2. High wet bulb temperatures**, as a combination of heat and high humidity levels, can lead to heat illness and death.
- 3. Reduced farm crop yields** can put strain on local food supplies, which are necessary for self-sufficient communities and resilience.
- 4. Sea level rise** is a slow-moving risk compared to some others listed here, but is one of the more difficult factors to mitigate.
- 5. Wildfires** can threaten the existence of communities and their surroundings, while causing air quality issues.
- 6. Economic damages** are important to consider for the viability of a community, the prosperity of its residents, and an ability to fund adaptation to other climate risk factors.

Risk Factors from Four Twenty Seven³

- 7. Water stress** is an existential threat, as many communities cease to exist when once-reliable water sources dry up temporarily, seasonally, or permanently.
- 8. Extreme rainfall** can cause flooding, landslides, and other issues.
- 9. Hurricanes** can abruptly destroy large swaths of infrastructure while putting lives at risk, especially as these storms intensify and move further north.

B.2 RATING SYSTEM

The climate risk score for places weights the nine considered climate risks, on a scale of 0 to 14. A higher score constitutes more risk. Each factor is assigned a maximum number of points, with thresholds that we've determined which correspond to the data from Four Twenty Seven's 0-4 scale and Propublica's 1-10 scale.

Counties with a risk score of 0 to 2 are considered to be receiving geographies. A score of 3 is a marginal receiving geography. A score of 4 or more is a sending geography.

- 1. Extreme Heat:** 1 point
1 point if Propublica score is 5+.
- 2. High Wet Bulb Temperatures:** 1 point.
1 point if Propublica score is 5+.
- 3. Reduced Farm Crop Yields:** 1 point.
1 point if Propublica score is 5+.
- 4. Sea Level Rise:** 3 points.
3 points if Propublica score is 5+, 2 points if Propublica score is 4+, 1 point if Propublica score is 2+.

5. Wildfires: 2 points.

2 points if Propublica score is 5+, 1 point if Propublica score is 1.

6. Economic Damages: 1 point.

1 point if Propublica score is 5+.

7. Water Stress: 4 points.

4 points if 427 score is 4, 3 points if 427 score is 3, 1 point if 427 score is 2.

8. Extreme Rainfall: 1 point.

1 point if 427 score is 2+.

9. Hurricanes: 1 point.

1 point if 427 score is 2+.

B.3 ADDITIONAL LOCAL CRITERIA**Quality Urban Form**

Once county risk levels are assessed, and receiving geographies are determined, additional local criteria must be considered to narrow down receiving places from larger receiving geography regions. These criteria are urban form and local flooding, which cannot be assessed on the county level.

Extant quality urban form is necessary as a prerequisite of resilience and capacity for growth. The development pattern of a place can be best adapted for the future if its structure is interconnected and flexible, the opposite of chaotic, disjointed sprawl. Ideally, the place is also mixed-use and compact to some degree, making efficient use of land while supporting multi-modal transportation options.

Below, a compact, interconnected receiver place is shown at the same scale beside a sprawling, disconnected, fragile place that sits within a receiving county but does not meet the criteria of a receiver place. For reasons of urban form, Washington, PA is on our list, and Cranberry Township, PA is not.

Washington, PA⁴: Receiver Place

Cranberry Township, PA⁵: Poor Urban Form

Local Flooding

If a county has low climate change risk and a place within that county has good urban form, local flooding conditions can still make or break a climate receiver place.

Local flooding considered in this project comes in three types: lake level fluctuations, sea level rise, and urban flooding.

For lake level fluctuations, we've looked at the great lakes' record high water levels, adding 3 meters for expected volatility in an era of climate change and seiches and mapping⁶ the result.

For sea level rise, we've considered projections from Climate Central⁷, though this had little impact on our study, given the very limited coastal geography that qualifies as receiving geography in our county-level study.

For urban flooding, we assessed local risk for 500 year floods by FloodFactor⁸. If a place has low risk, risk that is well-contained to part of a community, **and/or risk that has a limited impact on the parts of a community with the strongest urban form**, it may qualify as a receiver place. If the viability of a place is compromised by its flood risk, then it is removed from consideration.

Risk level for each community for each type of flooding has been assessed qualitatively on a case-by-case basis.

C. Receiving Geography

Introduction to Receiving Geography

Based on climate risk scores and additional local criteria described in the Climate Risk section of this guide, PLACE Initiative has selected a series of climate receiver places. These places are potential candidates for using the resources of the Climate Receiver Places Project and working with our team to become the receiver places of the future. Additional data about receiving geography is published on our website, at placeinitiative.org/projects/receiver-places/01-geography/

C.1 MAP OF COUNTY RISK SCORES

This map, on page 8, displays climate risk scores by county. Blue counties have low climate risk scores, while green counties have medium risk scores, and white counties have high risk scores. Blue counties are better situated to remain viable and healthy in an era of climate change, acting as receiving geographies for migrants and refugees from less climate-resilient places.

C.2 MAP OF RECEIVER COUNTIES

This map, on page 9, displays receiving geography status for each county. Blue counties are receiving geographies, with risk scores of 0 to 2, as compared to a maximum score of 14. Green counties are marginal receiving geographies, with risk scores of 3. Places here are considered as receiving geographies or not on a case-by-case basis. Other counties are sending geographies, with risk scores of 4 to 14.

C.3 MAP OF RECEIVER PLACES

This map, on page 10, displays receiver places selected by PLACE Initiative. Places are color coded based on county-level climate risk score on a scale of 0 to 14 (14 being the highest risk), and sized based on municipal population. Greyed-out counties follow the receiver counties outlined in the previous map. [The list communities included on this map is by no means comprehensive.](#)

It should be noted that there appear to be several major bands and clusters of potential climate receiver places across the contiguous United States. We urge these places to collaborate in order to achieve intra-regional and inter-regional reorganization of infrastructure and partnerships under these receiving geography assumptions.

Climate Receiver Place County Risk Scores

Climate Receiver Places Project at PLACE Initiative

The receiving geography maps are not authoritative. They represent a first iteration of an analysis to define places at lesser risk of negative impacts from climate change, where focused action is most likely to be successful at producing lasting long-term positive impacts.

Map Version 2.0. Meta-analysis based on data from Four Twenty Seven and ProPublica, July 2022. This map displays receiver places selected by PLACE Initiative. Places are color coded based on county-level climate risk score on a scale of 0-14 (14 being the highest risk), and sized based on municipal population. Greyed out counties follow the receiving geographies outlined in the County Map of Receiving Geography. Risk score does not include local flood risk.

C.4 LIST OF LARGE RECEIVER PLACES

The 54 cities listed below have populations of more than 100,000 within city limits and sit at the centers of receiver places. We have identified smaller receiver places as well, with 2,583 total municipalities at the centers of receiver places across the United States. These are listed approximately in population order from largest to smallest.

Columbus, Ohio	Buffalo, New York	Olathe, Kansas
Charlotte, North Carolina	Winston-Salem, North Carolina	Ramapo, New York
Seattle, Washington	Arlington, Virginia	Cedar Rapids, Iowa
Denver, Colorado	Spokane, Washington	Athens, Georgia
Detroit, Michigan	Tacoma, Washington	Fargo, North Dakota
Portland, Oregon	Des Moines, Iowa	Columbia, Missouri
Atlanta, Georgia	Birmingham, Alabama	Ann Arbor, Michigan
Kansas City, Missouri	Rochester, New York	Lansing, Michigan
Colorado Springs, Colorado	Huntsville, Alabama	Independence, Missouri
Minneapolis, Minnesota	Grand Rapids, Michigan	Rochester, Minnesota
Cleveland, Ohio	Akron, Ohio	Manchester, New Hampshire
Lexington, Kentucky	Knoxville, Tennessee	High Point, North Carolina
St. Paul, Minnesota	Worcester, Massachusetts	Lowell, Massachusetts
St. Louis, Missouri	Vancouver, Washington	Everett, Washington
Cincinnati, Ohio	Sioux Falls, South Dakota	Gresham, Oregon
Pittsburgh, Pennsylvania	Kansas City, Kansas	Hillsboro, Oregon
Greensboro, North Carolina	Bellevue, Washington	Greeley, Colorado
Madison, Wisconsin	Syracuse, New York	Davenport, Iowa

C.4 LIST OF SMALLER RECEIVER PLACES

The 2,529 climate receiver places listed below have populations of less than 100,000 within city limits. These are listed in alphabetical order. This list is by no means comprehensive, especially when considering places with populations of several thousand or less. If you believe your community may be missing from this list, please let us know.

Abbotsford, Wisconsin	Albertville, Alabama	Altamont, New York
Abercrombie, North Dakota	Albia, Iowa	Alton, Iowa
Aberdeen, South Dakota	Albin, Wyoming	Altona, Illinois
Abingdon, Illinois	Albion, Iowa	Altoona, Pennsylvania
Abingdon, Virginia	Albion, New York	Altoona, Wisconsin
Ackley, Iowa	Alburnett, Iowa	Altura, Minnesota
Adams, Minnesota	Alcester, South Dakota	Alvarado, Minnesota
Adams, North Dakota	Alden, Iowa	Alvord, Iowa
Adams, Wisconsin	Alden, New York	Amasa, Michigan
Adell, Wisconsin	Aledo, Illinois	Amberg, Wisconsin
Adrian, Minnesota	Alexander City, Alabama	Ambrose, North Dakota
Agency, Iowa	Alexandria, Minnesota	Ames, Iowa
Ahmeek, Michigan	Alexandria, South Dakota	Amherst, Massachusetts
Akaska, South Dakota	Allen Park, Michigan	Amherst, Ohio
Akron, Iowa	Allerton, Iowa	Amity, Oregon
Alamo, North Dakota	Allouez, Wisconsin	Anamoose, North Dakota
Alba, Michigan	Almont, Michigan	Anamosa, Iowa
Albany, New York	Almont, North Dakota	Anderson, South Carolina
Albany, Oregon	Alpena, South Dakota	Andrew, Iowa
Albemarle, North Carolina	Alpha, Michigan	Aneta, North Dakota
Albers, Illinois	Alta Vista, Iowa	Anniston, Alabama
Albert City, Iowa	Alta, Iowa	Ansonia, Ohio
Alberta, Minnesota	Altamont, Illinois	Anthon, Iowa

Antigo, Wisconsin	Ashton, Iowa	Aviston, Illinois
Antlers, Oklahoma	Ashton, South Dakota	Avoca, Minnesota
Appleton, Wisconsin	Askov, Minnesota	Avon, New York

Zeeland, Michigan

Zeeland, North Dakota

Zumbrota, Minnesota

D. Next Steps

Overview

Now that the goals and principles of receiver places have been presented, this proceeding section of the Community Principles Guide is meant to provide a workflow of next steps for communities. When reading the principles, consider these in light of the higher level and more overarching goals. Look at every principle with each of the individual goals in mind. The steps below are one possible path of action for local governments and officials. Each place is different, and each group will make use of this project in varying ways, so it's significant for receiver places to uniquely craft their own set of next steps depending on differing circumstances.

Before you begin this process, please take a look at the documents of the Climate Receiver Places Project. You can also connect with PLACE Initiative so we're aware of your local group and can loop you into our conversations. Visit us at: placeinitiative.org/projects/receiver-places/

D.1 CONNECT & PREPARE

D.1.1. Team Building. Establish a core, dedicated local team. This team will expand through capacity building but success relies upon strong core advocates.

D.1.2. Information Gathering. Build an internal picture of your place physically, socially, and culturally; identify data sources; organizational and municipal programs, goals, and capacity.

D.1.3. Assessment. Score your community on the goals and principles from the Community Principles Guide, using the Community Assessment Guide. Use this to create your place's Community Assessment Report. Identify strengths, weaknesses, and areas of focus for targeted next steps in this report as well.

D.2 PLAN & ADVOCATE

D.2.1. Capacity Building. Identify local and regional partners and community advocates; craft project materials focused on their areas of concern; build a coalition to implement the community principles.

D.2.2. Planning. Create a plan of action that responds to the conclusions of assessment report. Make meaningful resource commitments to implement changes that touch upon all principles and goals of the Community Principles Guide as a part of this plan.

D.2.3. Education. Educate the public and officials on the Community Assessment Report and the changes that you've planned and committed to making in order to address the strengths and weaknesses in this report.

D.3 IMPLEMENT & ADJUST

D.3.1. Make Change. Create change that touches upon all principles & goals of the Community Principles Guide, both at local and regional scales.

D.3.2. Measure Outcomes. Reengage the information gathering and assessment steps, to create a post-assessment of the changes you've made and other changes in your community. The post-assessment will become the foundation for repeating this process, beginning again with step "D.2: Plan & Advocate".

D.3.3. Share and Adjust. Share the results of your post-assessment with the community. Regularly return to step "D.2: Plan & Advocate" to begin the next iteration of implementation towards becoming a stronger receiving community.

E. Acknowledgments

Here, we're acknowledging those who have contributed to the Receiving Geography Guide.
